

Juggling Chainsaws

David Golden
Senior Engineer, MongoDB

YAPC::NA 2015

I lead the
MongoDB Perl
driver project

Do I need to explain
what MongoDB is?

For startups that want to be enterprises
and enterprises that want to be startups.
MongoDB for mission-critical apps.

[See Customer Case Studies >](#)

NoSQL

Not NoSQL

Not NoSQL

Documents

Auto-sharding

Native replication

Pluggable storage engines

Aggregation framework queries

Comprehensive secondary indexes

Multiple geospatial indexes and text search

ACID guarantees available at the document level

Fault tolerance and disaster recovery through automated failover

Enterprise-version has extensive capabilities for authentication, authorization, auditing and encryption

Ops Manager and MMS provide continuous incremental backup, point-in-time recovery of replica sets and consistent snapshots of sharded clusters.

Ho-Ho-HoA

Perl programmers use
dynamic data structures
all the time!!!

MongoDB

Data Structures

```
{
  name      => 'The Tick',
  battlecry => 'Spoon!',
  birthday  => '1973-07-16',
  relations => {
    friends => [
      'Arthur',
      'Die Fledermaus',
      'American Maid',
    ],
    foes    => [
      'The Terror',
      'Thrakkorzog',
    ],
  }
}
```

Sort heroes by
first friend's name?

```
{
  name      => 'The Tick',
  battlecry => 'Spoon!',
  birthday  => '1973-07-16',
  relations => {
    friends => [
      'Arthur',
      'Die Fledermaus',
      'American Maid',
    ],
    foes    => [
      'The Terror',
      'Thrakkorzog',
    ],
  }
}
```

```
# Perl using Schwartzian Transform
my @sorted =
    map { $_->[0] }
    sort { $a->[1] cmp $b->[1] }
    map { [$_, $_->{relations}{friends}[0] ]};
```

```
# MongoDB using query with sort clause
my @sorted = $heroes->find(
  {}, { sort => [ 'relations.friends.0' => 1 ] }
)->all;
```

```
# Perl using Schwartzian Transform
```

```

Manipulexity
Whipuptitude

Manipulexity

Manipulation of complex things

— *Larry Wall*

Whipuptitude

Aptitude for whipping things up

— *Larry Wall*

Tools for getting
the job done

Swiss-Army knife?

Swiss-Army chainsaw!!!

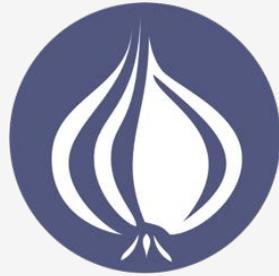

Henry Spencer described the Perl scripting language as a “**Swiss-Army chainsaw**”, intending to convey his evaluation of the language as **exceedingly powerful but ugly and noisy and prone to belch noxious fumes.**

— *The Jargon File*

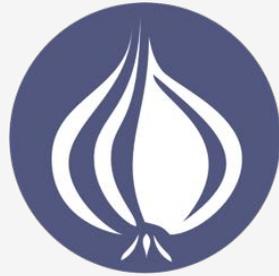

This had two results: (1) Perl fans adopted the epithet as a badge of pride, and (2) it entered more general usage to describe software that is **highly versatile but distressingly inelegant.**

— *The Jargon File*

Highly versatile but
distressingly inelegant?

YES

Great at a few things

Good enough
for many things

And if one is good,
wouldn't two be better?

+

CPAN Meta file indexing

META.json

```
{
  "abstract" : "File path utility",
  "author" : [
    "David Golden <dagolden@cpan.org>"
  ],
  "name" : "Path-Tiny",
  "prereqs" : {
    "runtime" : {
      "requires" : {
        "Carp" : "0",
        "Cwd" : "0",
        "Digest" : "1.03",
        "Digest::SHA" : "5.45",
        ...
      },
    },
    ...
  },
  "provides" : {
    "Path::Tiny" : {
      "file" : "lib/Path/Tiny.pm",
      "version" : "0.068"
    },
    ...
  },

  ],
  ...
}
```

Thought experiment:
Rebuild CPAN?

Rebuilding CPAN?

- Tarball storage
- Tarball processing
- Worker logs
- Index lookup
- Text search

Storage: GridFS

```
# store a file
open $fh, "<", $tarball_path;
$gridfs = $db->get_gridfs("tarballs");
$id      = $gridfs->put($fh, $metadata);
```

```
# get a file
$bytes = $gridfs->get($id)->slurp;
```

Processing: MongoDBx::Queue

```
# in supervisor
my $queue = MongoDBx::Queue->new(...);
$queue->add_task({ tarball_id => $id });

# in worker
while ( my $task = $queue->reserve_task )
{
    # ... process tarball ...
    $queue->remove_task( $task );
}
```

Logging: capped collection

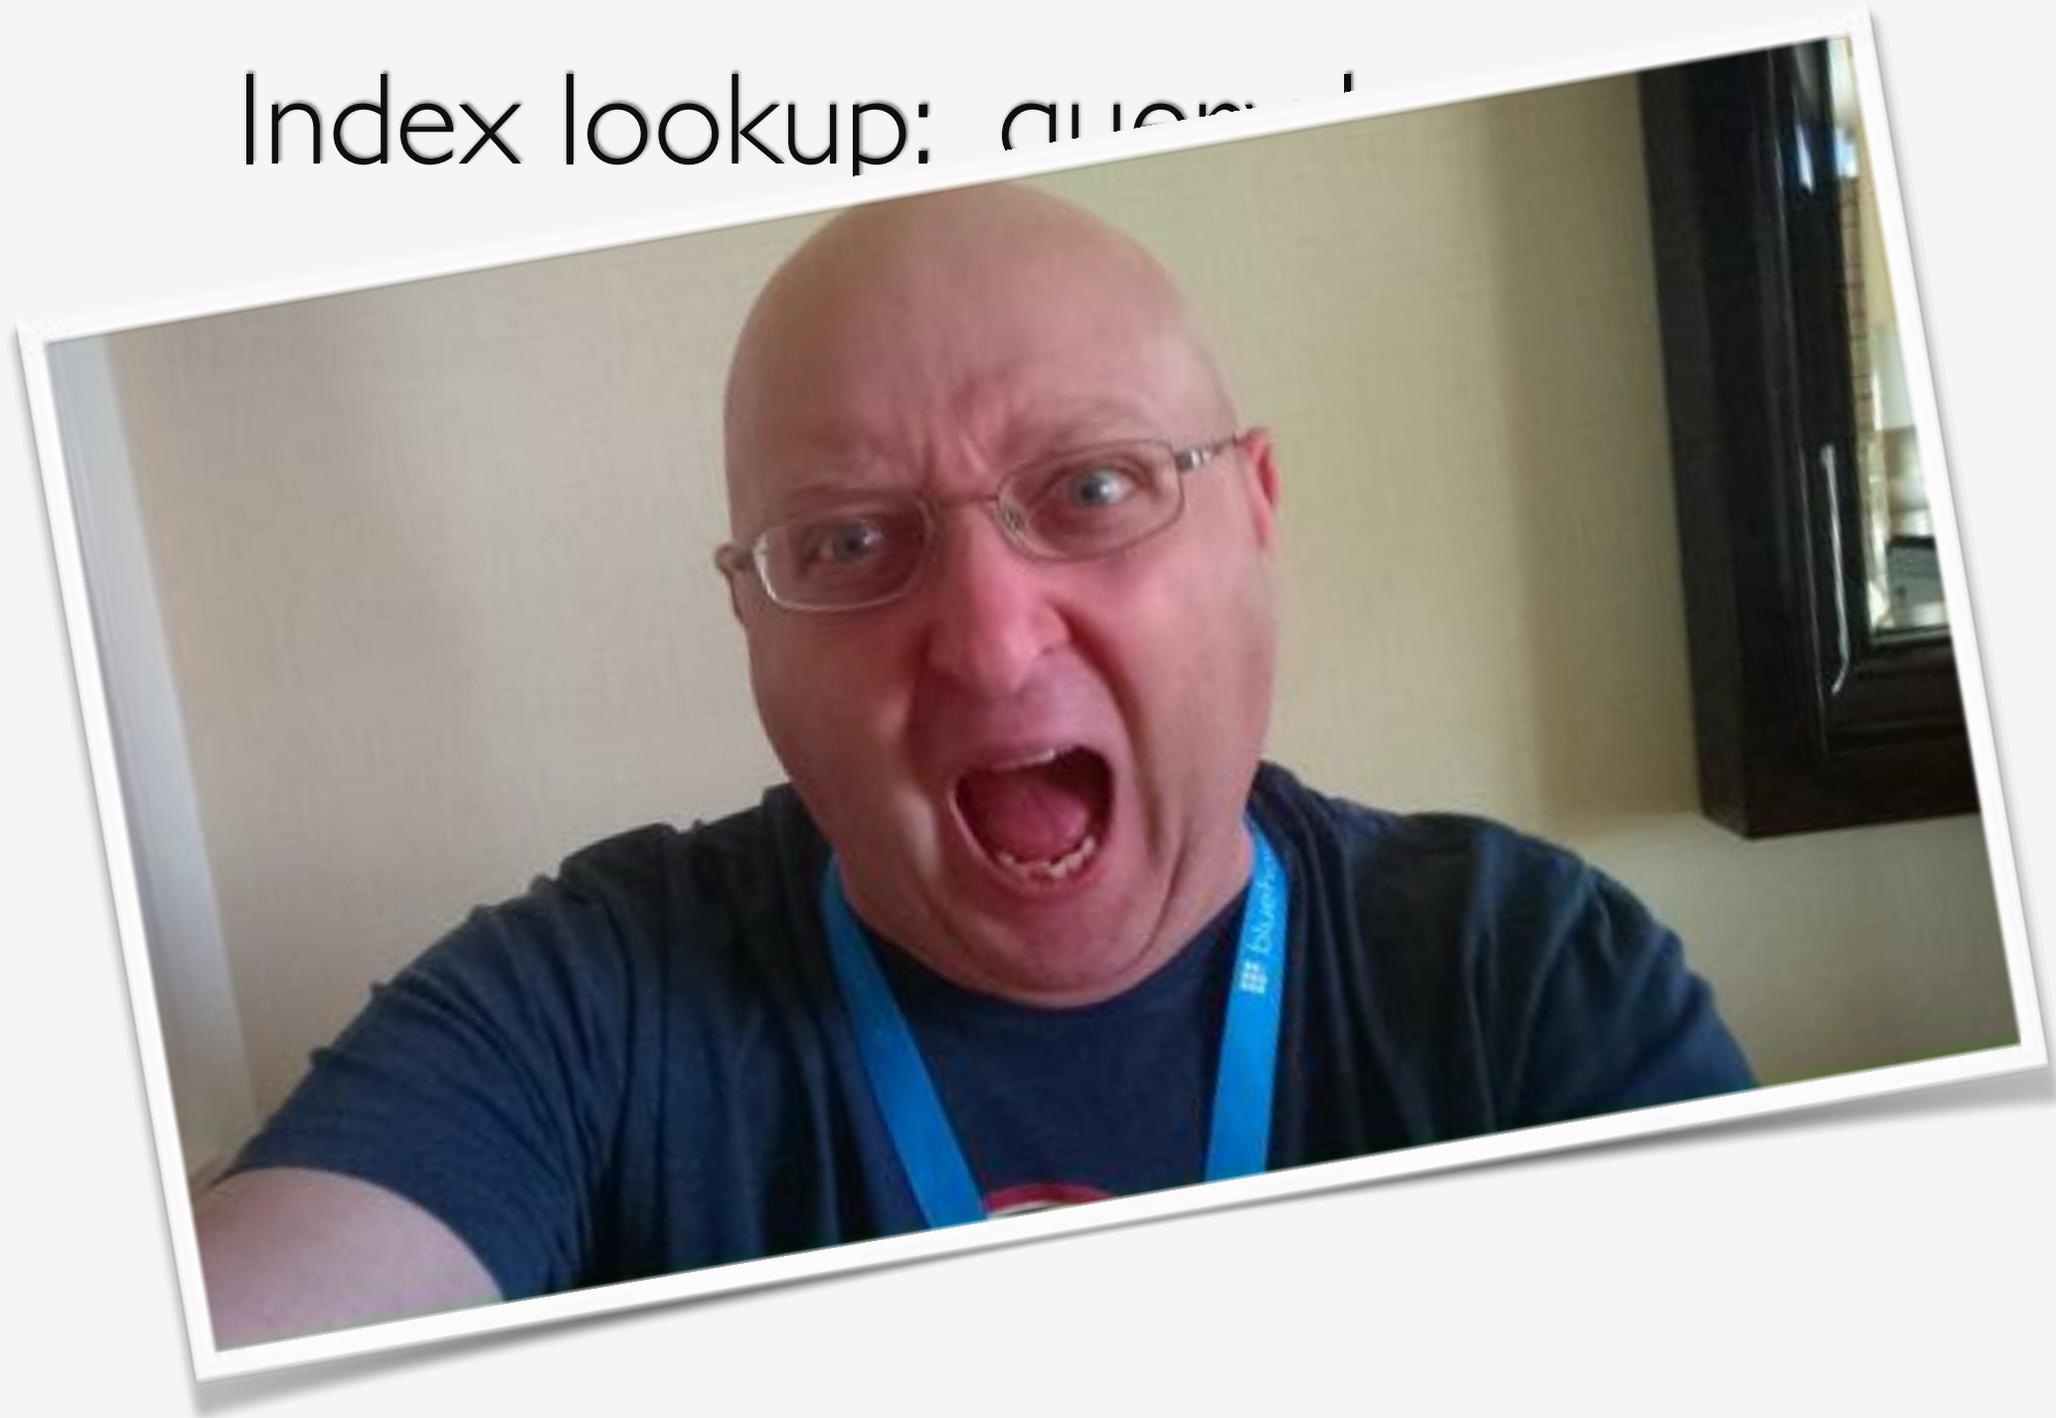

```
$db->run_command([  
    create => "pause_log",  
    capped => true,  
    max => 1000,  
]);
```

```
$log->find(  
    {}, { cursorType => 'tailable' }  
);
```

Index lookup: query language

```
$packages->find(  
  {  
    mod => "Foo",  
    ver => {  
      '$gte' => $v_min,  
      '$lte' => $v_max,  
    },  
  }  
);
```

Index lookup: query

Index lookup (take 2)

```
$meta->find(  
  {  
    '_authorized.Foo' => true  
    'release_status'  => 'stable',  
  }  
);  
  
# sort through versions client side  
# with version.pm
```

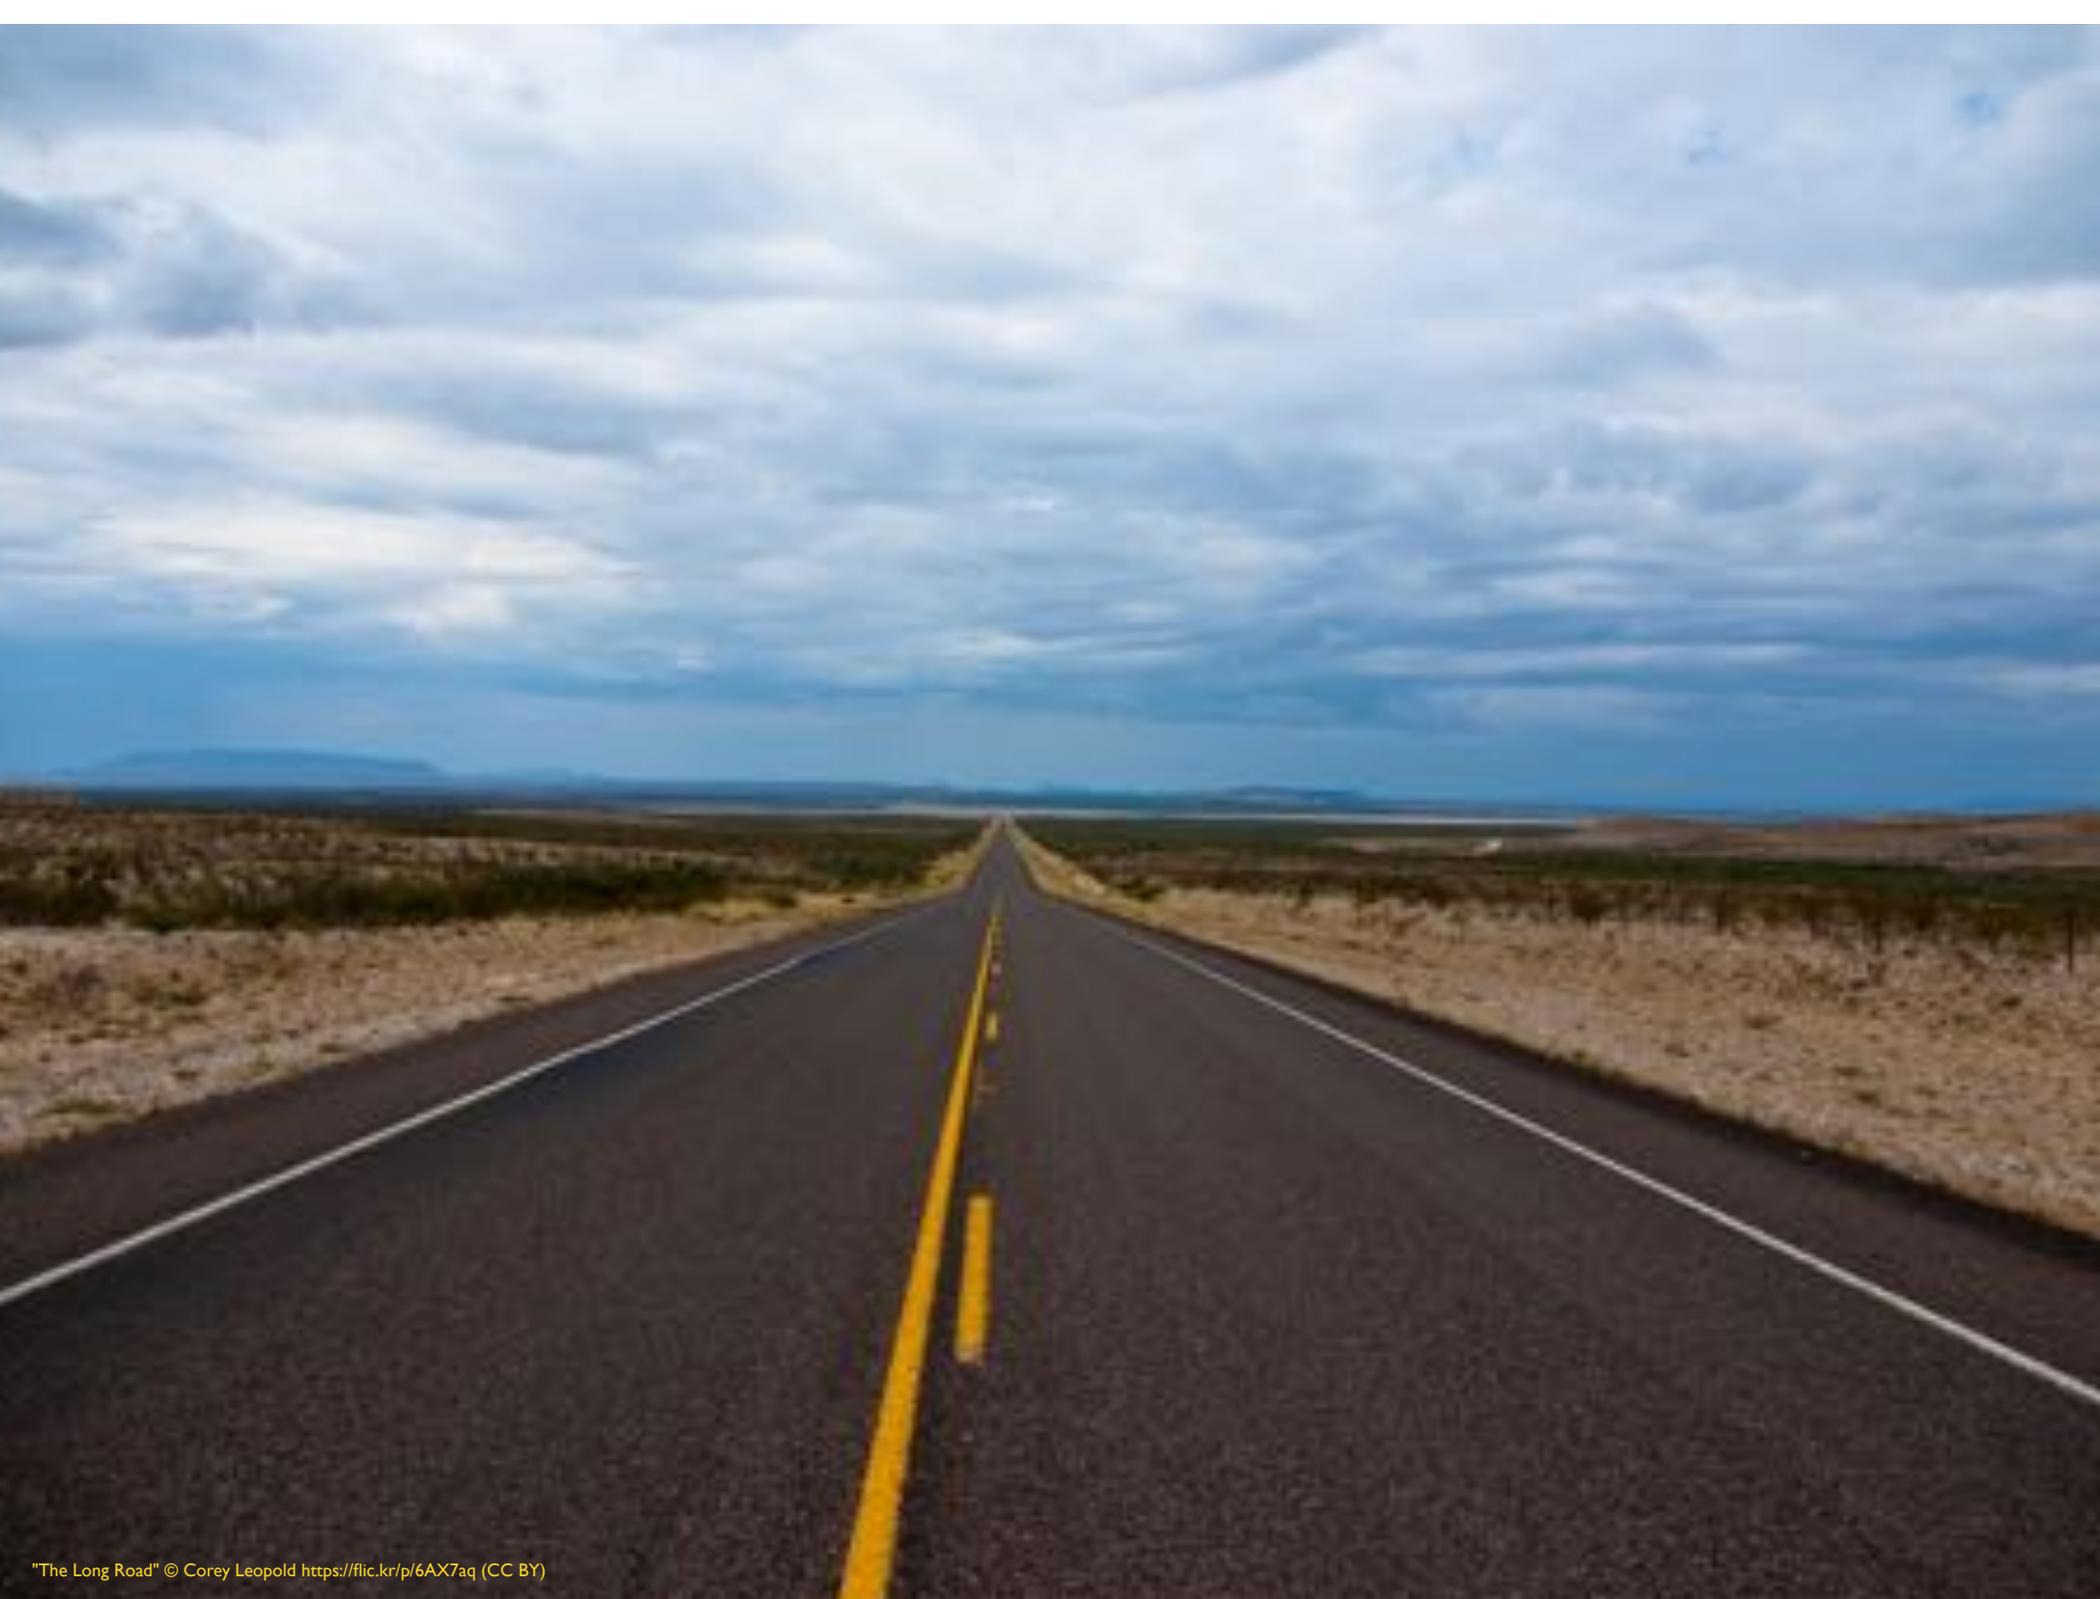

Text search: text indexes

```
$meta->indexes->create_one([  
  abstract: "text",  
  keywords: "text",  
]);
```

```
$meta->find( {  
  '$text' => {  
    '$search' => "dist zilla plugin"  
  }  
});
```

Some other handy tools

- Geographic indexing and search
- TTL indexes (auto-expiration)

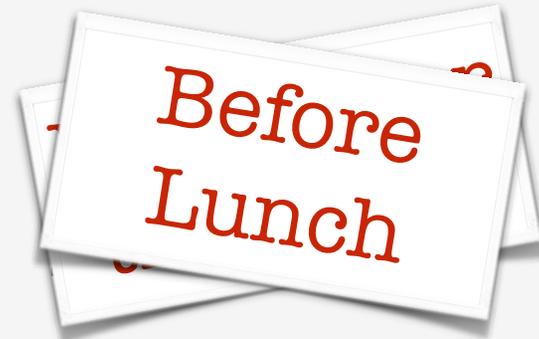

Coming soon:
